## Introduction:

This project report was done to add a class to the project of coursework 1 to make a graphical user interface (GUI) for a system that stores details of developers. This coursework was given to us in 20<sup>th</sup> week and was required to be submitted by 24<sup>th</sup> week.

This coursework was all about writing program in java. Java is one of the most popular programming languages. Many users choose java for developing different program as it is very versatile and compatible in nature. Java can be used for a large number of things including software development, mobile applications, and large systems development. Writing, compiling and debugging a program is easy in java. It helps to create modular programs and reusable code.

The java program developed in this coursework consists of main user interface GUI where the user performs all the activities. Here, the class RigoTechnology acts like a bridge to all the other classes. Staying in RigoTechnology class, user can use and interact with all the function of all the other classes.

We can perform all the activities of developer, seniorDeveloper and juniorDeveloper staying in RigoTechnology class including adding a platform, hiring developer, terminating contract of developer and many other.

## Class Diagram

## Pseudocode

Following are the pseudocode for all the method used in RigoTechnology class:

### 1. **gui():**

Create a public void method: gui()

Do:

Create object of JFrame: myFrame;

Declare size of myFrame;

Create object of JLabel: lblSeniorDeveloper ("Senior Developer");

Set bound for lblSeniorDeveloper;

Add lblSeniorDeveloper to myFrame;

Create object of JLabel: lblPlatformS ("Platform:");

Set bound for lblPlatformS;

Add lblPlatformS to myFrame;

Create object of JTextField: txtPlatformS;

Set bound for txtPlatformS;

Add txtPlatformS to myFrame;

Create object of JLabel: lblInterviewerNameS ("Interviewer Name:");

Set bound for lblInterviewerNameS;

Add lblInterviewerNameS to myFrame;

Create object of JTextField: txtInterviewerNameS;

Set bounds for txtInterviewerNameS;

Add txtInterviewerNameS to myFrame;

Create object of JLabel: lblWorkingHoursS ("Working Hours:");

Set bound for lblWorkingHoursS;

Add lblWorkingHoursS to myFrame;

```
Create object of JTextField: txtWorkingHoursS;  
Set bounds for txtWorkingHoursS;  
Add txtWorkingHoursS to myFrame;
```

```
Create object of JLabel: lblSalaryS ("Salary:");
Set bound for lblSalaryS;
Add lblSalaryS to myFrame;
```

```
Create object of JTextField: txtSalaryS;  
Set bounds for txtSalaryS;  
Add txtSalaryS to myFrame;
```

```
Create object of JLabel: lblContractPeriod ("Contract Period:");
Set bound for lblContractPeriod;
Add lblContractPeriod to myFrame;
```

```
Create object of JTextField: txtContractPeriod;  
Set bounds for txtContractPeriod;  
Add txtContractPeriod to myFrame;
```

```
Create object of JButton: btnAddSen ("Add");
Set bounds for btnAddSen;
Add btnAddSen to myFrame;
```

```
Create object of JLabel: lblDotLineSen ("-----  
-----");  
Set bound for lblDotLineSen;  
Add lblDotLineSen to myFrame;
```

```
Create object of JLabel: lblDeveloperNameS ("Developer Name:");
Set bound for lblDeveloperNameS;
Add lblDeveloperNameS to myFrame;
```

Create object of JTextField: txtDeveloperNameS;  
Set bounds for txtDeveloperNameS;  
Add txtDeveloperNameS to myFrame;

Create object of JLabel: lblJoiningDate ("Joining Date:");  
Set bound for lblJoiningDate;  
Add lblJoiningDate to myFrame;

Create object of JTextField: txtJoiningDate;  
Set bounds for txtJoiningDate;  
Add txtJoiningDate to myFrame;

Create object of JLabel: lblStaffRoomNumber ("Staff Room Number:");  
Set bound for lblStaffRoomNumber;  
Add lblStaffRoomNumber to myFrame;

Create object of JTextField: txtStaffRoomNumber;  
Set bounds for txtStaffRoomNumber;  
Add txtStaffRoomNumber to myFrame;

Create object of JLabel: lblAdvanceSalary ("Advance Salary:");  
Set bound for lblAdvanceSalary;  
Add lblAdvanceSalary to myFrame;

Create object of JTextField: txtAdvanceSalary;  
Set bounds for txtAdvanceSalary;  
Add txtAdvanceSalary to myFrame;

Create object of JLabel: lblSelectPlatformS ("Select Platform:");  
Set bound for lblSelectPlatformS;  
Add lblSelectPlatformS to myFrame;

Create a list: selectPlatformS[] = {"Select platform", "No platform registered"};  
Create object of JComboBox: cmbSelectPlatformS(selectPlatformS);

```
Set bound for cmbSelectPlatformS;  
Add cmbSelectPlatformS to myFrame;
```

```
Create object of JButton: btnHire ("Hire");  
Set bounds for btnHire;  
Add btnHire to myFrame;
```

```
Create object of JButton: btnTerminate ("Terminate");  
Set bounds for btnTerminate;  
Add btnTerminate to myFrame;
```

```
Create object of JLabel: lblEndLine  
("=====");  
Set bound for lblEndLine;  
Add lblEndLine to myFrame;
```

```
Create object of JLabel: lblJuniorDeveloper ("JUNIOR DEVELOPER");  
Set bound for lblJuniorDeveloper;  
Add lblJuniorDeveloper to myFrame;
```

```
Create object of JLabel: lblPlatformJ ("Platform:");  
Set bound for lblPlatformJ;  
Add lblPlatformJ to myFrame;
```

```
Create object of JTextField: txtPlatformJ;  
Set bounds for txtPlatformJ;  
Add txtPlatformJ to myFrame;
```

```
Create object of JLabel: lblInterviewerNameJ ("Interviewer Name:");  
Set bound for lblInterviewerNameJ;  
Add lblInterviewerNameJ to myFrame;
```

```
Create object of JTextField: txtInterviewerNameJ;
```

Set bounds for txtInterviewerNameJ;  
Add txtInterviewerNameJ to myFrame;

Create object of JLabel: lblAppointedBy ("Appointed By:");  
Set bound for lblAppointedBy;  
Add lblAppointedBy to myFrame;

Create object of JTextField: txtAppointedBy;  
Set bounds for txtAppointedBy;  
Add txtAppointedBy to myFrame;

Create object of JLabel: lblWorkingHoursJ ("Working Hours:");  
Set bound for lblWorkingHoursJ;  
Add lblWorkingHoursJ to myFrame;

Create object of JTextField: txtWorkingHoursJ;  
Set bounds for txtWorkingHoursJ;  
Add txtWorkingHoursJ to myFrame;

Create object of JLabel: lblSalaryJ ("Salary:");  
Set bound for lblSalaryJ;  
Add lblSalaryJ to myFrame;

Create object of JTextField: txtSalaryJ;  
Set bounds for txtSalaryJ;  
Add txtSalaryJ to myFrame;

Create object of JLabel: lblTerminationDate1 ("Termination Date:");  
Set bound for lblTerminationDate1;  
Add lblTerminationDate1 to myFrame;

Create object of JTextField: txtTerminationDate1;  
Set bounds for txtTerminationDate1;  
Add txtTerminationDate1 to myFrame;

Create object of JButton: btnAddJun ("Add");

Set bounds for btnAddJun;

Add btnAddJun to myFrame;

Create object of JLabel: lblDotLineJun ("-----  
-----");

Set bound for lblDotLineJun;

Add lblDotLineJun myFrame;

Create object of JLabel: lblDeveloperNameJ ("Developer Name:");

Set bound for lblDeveloperNameJ;

Add lblDeveloperNameJ to myFrame;

Create object of JTextField: txtDeveloperNameJ;

Set bounds for txtDeveloperNameJ;

Add txtDeveloperNameJ to myFrame;

Create object of JLabel: lblAppointedDate ("Appointed Date:");

Set bound for lblAppointedDate;

Add lblAppointedDate to myFrame;

Create object of JTextField: txtAppointedDate;

Set bounds for txtAppointedDate;

Add txtAppointedDate to myFrame;

Create object of JLabel: lblEvaluationPeriod ("Evaluation Period:");

Set bound for lblEvaluationPeriod;

Add lblEvaluationPeriod to myFrame;

Create object of JTextField: txtEvaluationPeriod;

Set bounds for txtEvaluationPeriod;

Add txtEvaluationPeriod to myFrame;

Create object of JLabel: lblSpecialization ("Specialization:");  
Set bound for lblSpecialization;  
Add lblSpecialization to myFrame;

Create object of JTextField: txtSpecialization;  
Set bounds for txtSpecialization;  
Add txtSpecialization to myFrame;

Create object of JLabel: lblSelectPlatformJ ("Select Platform:");  
Set bound for lblSelectPlatformJ;  
Add lblSelectPlatformJ to myFrame;

Create a list: selectPlatformJ[] = {"Select platform", "No platform registered"};  
Create object of JComboBox: cmbSelectPlatformJ (selectPlatformJ);  
Set bound for cmbSelectPlatformJ;  
Add cmbSelectPlatformJ to myFrame;

Create object of JButton: btnAppoint ("Appoint");  
Set bounds for btnAppoint;  
Add btnAppoint to myFrame;

Create object of JButton: btnDisplayAll ("Display All");  
Set bounds for btnDisplayAll;  
Add btnDisplay to myFrame;

Create object of JButton: btnClear ("Clear");  
Set bounds for btnClear;  
Add btnClear to myFrame;

Create object of JLabel: lblTerminationDate2 ("Termination Date:");  
Set bound for lblTerminationDate2;  
Add lblTerminationDate2 to myFrame;

Create object of JTextField: txtTerminationDate2;

```
Set bounds for txtTerminationDate2;  
Add txtTerminationDate2 to myFrame;
```

```
Call btnClear.addActionListener(this);  
Call btnAddSen.addActionListener(this);  
Call btnAddJun.addActionListener(this);  
Call btnHire.addActionListener(this);  
Call btnTerminate.addActionListener(this);  
Call btnAppoint.addActionListener(this);  
Call btnDisplayAll.addActionListener(this);  
End do
```

## 2. **actionPerformed(ActionEvent e):**

Create a public void method: actionPerformed(ActionEvent e)

Do

```
    If (e.getSource() = btnClear) Do  
        Call clear();  
    End Do
```

```
    If (e.getSource() = btnAddSen) Do  
        Call addSen();  
    End Do
```

```
    If (e.getSource() = btnAddJun) Do  
        Call addJun();  
    End Do
```

```
    If (e.getSource() = btnHire) Do  
        Call hireSen();  
    End Do
```

```
If (e.getSource() = btnTerminate) Do
    Call terminateSen();
End Do
```

```
If (e.getSource() = btnAppoint) Do
    Call appointJun();
End Do
```

```
If (e.getSource() = btnDisplayAll) Do
    Call displayAll();
End Do
```

```
End Do
```

### 3. addSen():

Create a public void method: addSen()

Do

Try Do

```
String platformS = txtPlatformS.getText();
String interviewerNameS = txtInterviewerNameS.getText();
String workingHoursS = txtWorkingHoursS.getText();
String salaryS = txtSalaryS.getText();
String contractPeriod = txtContractPeriod.getText();

If (platformS.equals("") or interviewerNameS.equals("") or
    workingHoursS.equals("") or salaryS.equals("") or
    contractPeriod.equals("")) Do
    Print: "Please fill up all the required information";
End DO

Else Do
    int intWorkingHoursS = Integer.parseInt(workingHoursS);
    int intSalaryS = Integer.parseInt(salaryS);
```

```
int intContractPeriod = Integer.parseInt(contractPeriod);
```

```
SeniorDeveloper senDev = new SeniorDeveloper(platformS,  
interviewerNameS, intWorkingHoursS, intSalaryS, intContractPeriod);
```

```
Add SenDev to list;
```

```
If (cmbSelectPlatformS.getItemAt(1).equals("No platform registered")) Do
```

```
    Remove "No platform registered from cmbSelectPlatformS;
```

```
End Do
```

```
Add ("(id: " + i + ") " + platformS) to cmbSelectPlatformS;
```

```
i=i+1;
```

```
Print: "The platform is sucessfully registered to SeniorDeveloper";
```

```
End Do
```

```
End Do
```

```
Catch (Exception exp) Do
```

```
    Print: "Working hours, Salary and contract period must be a numeric  
    value.";
```

```
End Do
```

#### 4. hireSen():

Create a public void method: hireSen()

Do

Try Do

```
String developerNameS = txtDeveloperNameS.getText();
```

```
String staffRoomNumber = txtStaffRoomNumber.getText();
```

```
String selectPlatformS = cmbSelectPlatformS.getSelectedItem().toString();
```

```
String joiningDate = txtJoiningDate.getText();
```

```
String advanceSalary = txtAdvanceSalary.getText();
```

```
If (developerNameS.equals("") or staffRoomNumber.equals("") or
selectPlatformS.equals("Select platform") or joiningDate.equals("") or
advanceSalary.equals("")) Do
```

```
    Print: "Please fill up all the required information");
```

```
End Do
```

```
Else if (selectPlatformS.equals ("No platform registered")) Do
```

```
    Print: "There are no any platform registered");
```

```
End Do
```

```
Else Do
```

```
    float floatAdvanceSalary = Float.parseFloat(advanceSalary);
```

```
    int indexS = Character.getNumericValue(selectPlatformS.charAt(5));
```

```
    SeniorDeveloper senVar = (SeniorDeveloper)list.get(indexS);
```

```
    If (senVar.getAppointed() = true) Do
```

```
        Print: "The developer is already hired in this platform: "
```

```
    End Do
```

```
    Else Do
```

```
        Call senVar.hire(developerNameS, joiningDate, floatAdvanceSalary,
        staffRoomNumber);
```

```
        Print: "The developer: is successfully hired in platform: ";
```

```
    End Do
```

```
End Do
```

```
End Do
```

```
Catch (Exception exp) Do
```

```
    Print: "The value of Advance salary should be float";
```

```
End Do
```

## 5. TerminateSen():

Create a public void method: terminateSen()

Do

```
String selectPlatformS = cmbSelectPlatformS.getSelectedItemId().toString();
```

```
If (selectPlatformS.equals("Select platform") or selectPlatformS.equals("No platform registered")) Do
```

```
    Print: "Please select the platform that you want to terminate";
```

```
End Do
```

```
Else Do
```

```
    int index = Character.getNumericValue(selectPlatformS.charAt(5));
```

```
    SeniorDeveloper senVar = (SeniorDeveloper)list.get(index);
```

```
    If (senVar.getTerminated() = true) Do
```

```
        Print: "The contract of developer of platform is already terminated";
```

```
    End Do
```

```
    Else Do
```

```
        Print: "The contract of developer of platform is sucessfully terminated";
```

```
        Call senVar.termination();
```

```
    End Do
```

```
End Do
```

```
End Do
```

## 6. addJun():

Create a public void method: addJun()

Do

Try Do

```
String platformJ = txtPlatformJ.getText();
String interviewerNameJ = txtInterviewerNameJ.getText();
String workingHoursJ = txtWorkingHoursJ.getText();
String salaryJ = txtSalaryJ.getText();
String terminationDate1 = txtTerminationDate1.getText();
String appointedBy = txtAppointedBy.getText();
```

```
If (platformJ.equals("") or| interviewerNameJ.equals("") or
workingHoursJ.equals("") or salaryJ.equals("") or
terminationDate1.equals("") or appointedBy.equals("")) Do
```

```
    Print: "Please fill up all the required information";
```

```
End Do
```

Else Do

```
int intWorkingHoursJ = Integer.parseInt(workingHoursJ);
int intSalaryJ = Integer.parseInt(salaryJ);
```

```
JuniorDeveloper junDev = new JuniorDeveloper(platformJ,
interviewerNameJ, intWorkingHoursJ, intSalaryJ, appointedBy,
terminationDate1);
```

```
Add junDev to list;
```

```
If (cmbSelectPlatformJ.getItemAt(1).equals("No platform registered")) Do
```

```
    Remove "No platform registered from cmbSelectPlatformJ;
```

```
End Do
```

```
Add ("(id: " + i + ") " + platformJ) to cmbSelectPlatformJ;
```

```
i=i+1;
```

```
Print: "The platform is successfully registered to Junior Developer";
```

```
End Do
```

```
End Do
```

```
Catch (Exception exp) Do
```

```
Print: "Working hours and Salary must be a numeric value.";
```

```
End Do
```

```
End Do
```

## 7. appointJun():

Create a public void method: appointJun()

```
Do
```

```
String developerNameJ = txtDeveloperNameJ.getText();
```

```
String selectPlatformJ = cmbSelectPlatformJ.getSelectedItem().toString();
```

```
String specialization = txtSpecialization.getText();
```

```
String evaluationPeriod = txtEvaluationPeriod.getText();
```

```
String appointedDate = txtAppointedDate.getText();
```

```
String terminationDate2 = txtTerminationDate2.getText();
```

```
If (developerNameJ.equals("") or selectPlatformJ.equals("Select platform") or  
specialization.equals("") or evaluationPeriod.equals("") or  
appointedDate.equals("") or terminationDate2.equals("")) Do
```

```
Print: "Please fill all the required information";
```

```
End Do
```

```
Else if (selectPlatformJ.equals("No platform registered")) Do
```

```
Print: "There are no any platform registered";
```

```
End Do
```

```
Else Do
```

```
int indexJ = Character.getNumericValue(selectPlatformJ.charAt(5));
```

```
JuniorDeveloper junVar = (JuniorDeveloper)list.get(indexJ);
```

```
If (junVar.getJoined() = true) Do
    Print: "The developer is already appointed in this platform";
End Do
Else Do
    Call junVar.appoint(developerNameJ, terminationDate2, appointedDate,
        specialization, evaluationPeriod);
    Print: "The developer is sucessfully appointed";
End Do
End Do
End Do
```

## 8. displayAll():

Create a public void method: displayAll()

Do

For (Developer obj: list) Do

If (obj is instance of SeniorDeveloper) Do

Print: "Senior Developer:";

Print: "id: " + Integer.toString(list.indexOf(obj));

Call obj.display();

End Do

Else Do

Print: "Junior Developer:";

Print: "id: " + Integer.toString(list.indexOf(obj));

Call obj.display();

End Do

Print blank line;

End Do

End Do

**9. clear():**

Do

```
Set text of txtPlatformS as "";
Set text of txtInterviewerNameS as "";
Set text of txtWorkingHoursS as "";
Set text of txtSalaryS as "";
Set text of txtContractPeriod as "";
Set text of txtDeveloperNameS as "";
Set text of txtJoiningDate as "";
Set item of cmbSelectPlatformS as "Select platform";
Set text of txtAdvanceSalary as "";
Set text of txtStaffRoomNumber as "";
Set text of txtPlatformJ as "";
Set text of txtInterviewerNameJ as "";
Set text of txtSalaryJ as "";
Set text of txtWorkingHoursJ as "";
Set text of txtAppointedBy as "";
Set text of txtTerminationDate1 as "";
Set text of txtTerminationDate2 as "";
Set text of txtDeveloperNameJ as "";
Set text of txtAppointedDate as "";
Set text of txtSpecialization as "";
Set item of cmbSelectPlatformJ as "Select platform";
Set text of txtEvaluationPeriod as "";
```

End DO

**10. main(String [ ]args):**

Create a public static void main(String []args) method:

Do

Create an object of RigoTechnology() and call the method gui();

End Do

## Method description:

To complete this program, many methods were used. The method used in this coursework are given below with its short description:

### 1. **gui():**

This is the method which determine all the deigns, layouts and contains of the frame created in this class. All the text box, label, buttons required in the frame are declared in this method. Then their bounds are declared and finally they are added to the frame. It accepts no parameters.

### 2. **actionPerformed(ActionEvent e):**

This is the method that determines the functions of all the buttons present in the frame. It decides the activities that is to be performed when the specific button is clicked by the user. It accepts (ActionEvent e) as the parameter. The source of e can be used to know which button is clicked.

### 3. **addSen():**

This is a sub method declared in this class. This method contains all the code that is to be executed if user clicks ADD button for seniorDeveloper. This method is latter called in actionPerformed method if the source of action event is btnAddSen.

### 4. **hireSen():**

This is a sub method declared in this class. This method contains all the code that is to be executed if user clicks HIRE button for seniorDeveloper. This method is latter called in actionPerformed method if the source of action event is btnHireSen.

### 5. **terminateSen():**

This is a sub method declared in this class. This method contains all the code that is to be executed if user clicks TERMINATE button for seniorDeveloper. This method is latter called in actionPerformed method if the source of action event is btnterminateSen.

### **6. addJun():**

This is a sub method declared in this class. This method contains all the code that is to be executed if user clicks ADD button for juniorDeveloper. This method is latter called in actionPerformed method if the source of action event is btnAddJun.

### **7. appointJun():**

This is a sub method declared in this class. This method contains all the code that is to be executed if user clicks APPOINT button for juniorDeveloper. This method is latter called in actionPerformed method if the source of action event is btnAppoint.

### **8. displayAll():**

This is a sub method declared in this class. This method contains all the code that is to be executed if user clicks DISPLAY ALL button. This method is latter called in actionPerformed method if the source of action event is btnDisplayAll. It displays all the platforms and developer working of both senior and junior developer.

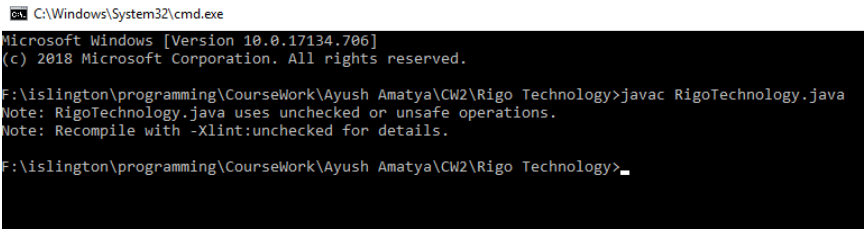

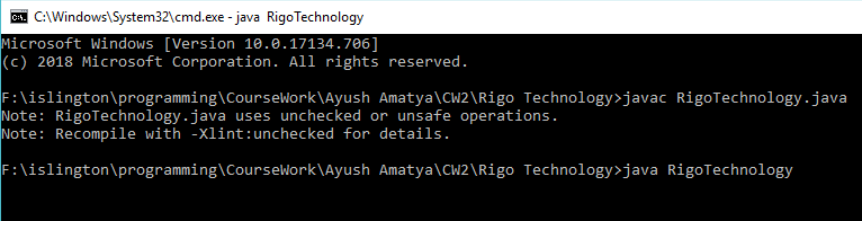

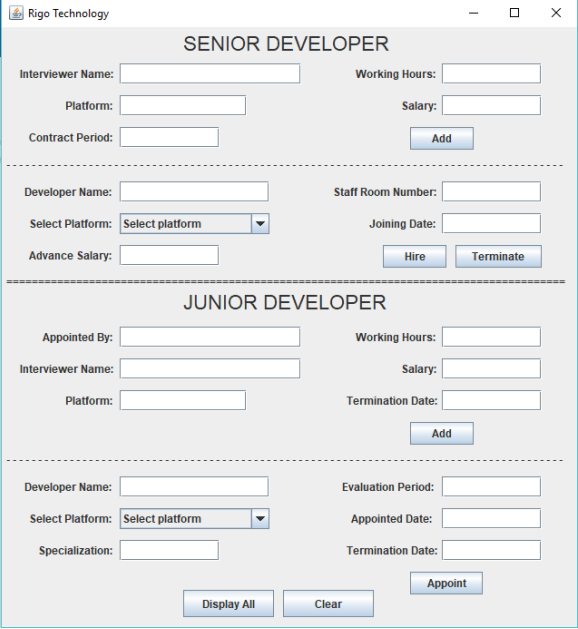

### **9. clear():**

This is a sub method declared in this class. This method contains all the code that is to be executed if user clicks CLEAR button. This method is latter called in actionPerformed method if the source of action event is btnClear. This clears all the text boxes of the frame if there are any text written there by the user.

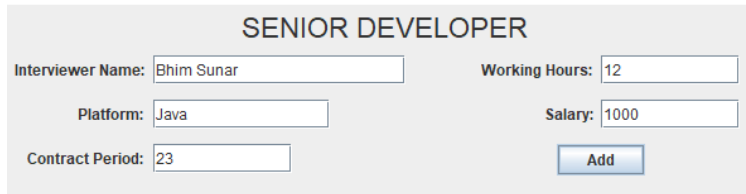

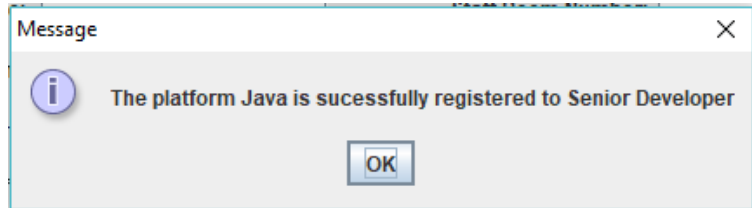

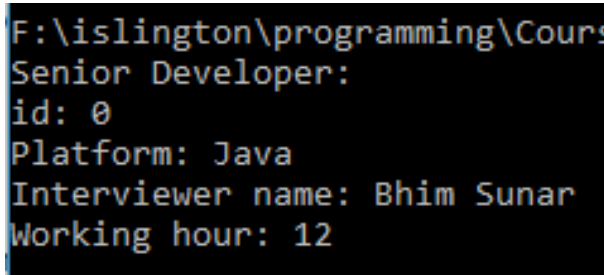

### **10. Main(String [ ] args):**

This is the main method of this class. This is the only method that is directly called by the user in real time. Gui() method is called in this method. When user runs this method then the frame is opened in the window.

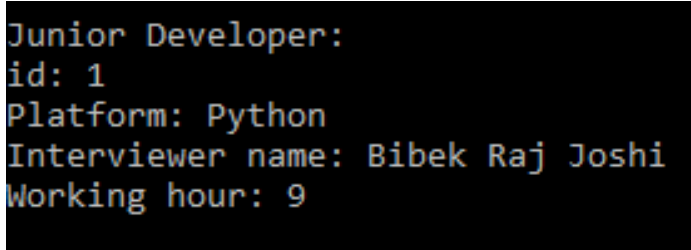

## Testing:

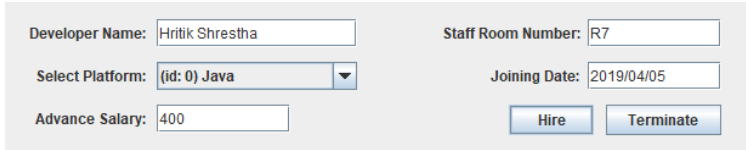

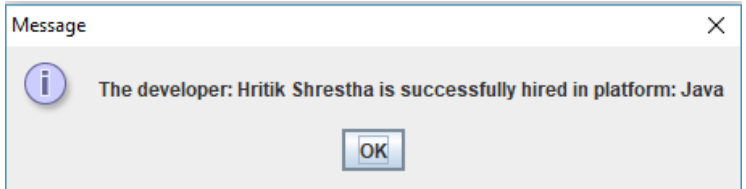

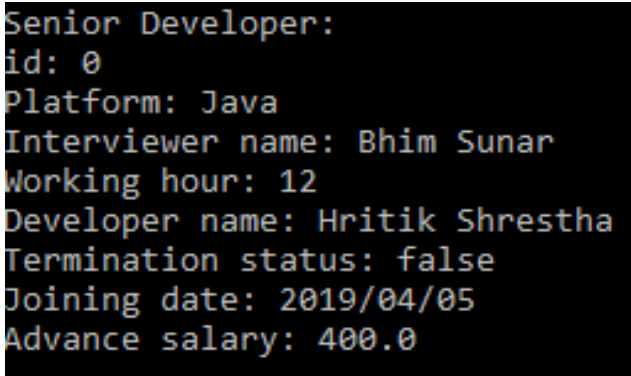

Test case number:	Test 1: Test that the program can be compiled and run using the command prompt.
Objective/Steps:	<p>1) Compile the program using command prompt</p>  <p>2) Run the program using command prompt</p>  
	<p>The program should be successfully compiled using command prompt without any errors.</p> <p>The frame should be displayed when the program is run.</p>

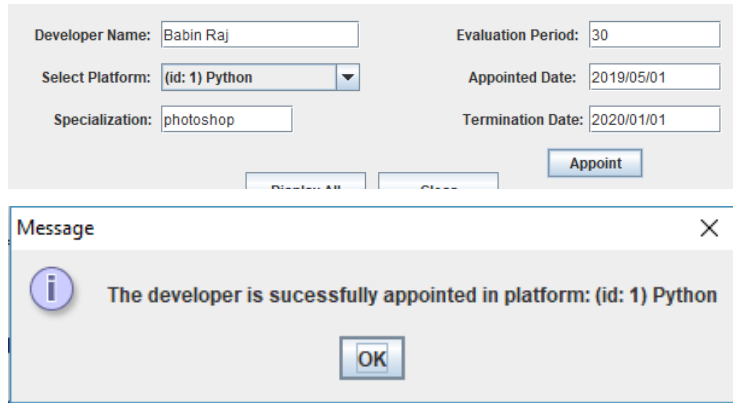

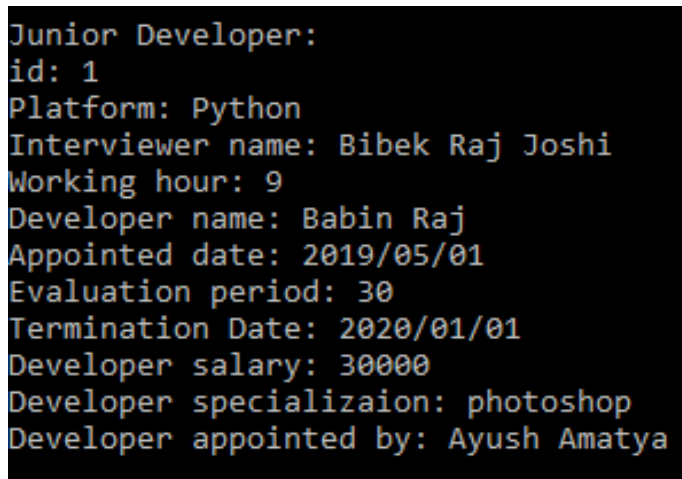

Actual result:	The program was successfully compiled using command prompt without any errors. The frame was displayed when the program is run.
Conclusion:	The program passed Test 1.

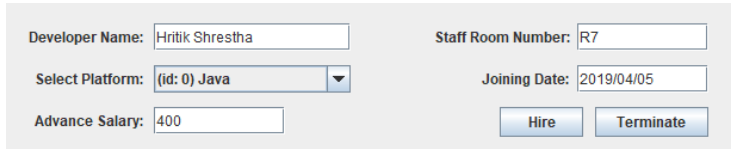

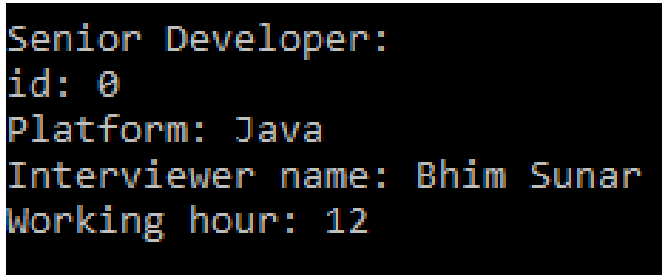

Test case number:	Test 2: Evidence should be shown of adding platform for senior developer
Objective/Steps:	<p>1. add platform for senior developer</p>   <p>2. click displayAll button and check output</p> 
Expected result:	Success message should appear. Information about platform should be displayed when display all button is clicked
Actual result:	Success message was appeared. Information about platform was displayed when display all button is clicked
Conclusion:	The program passed Test 2.

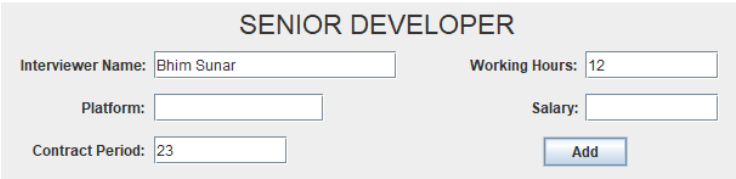

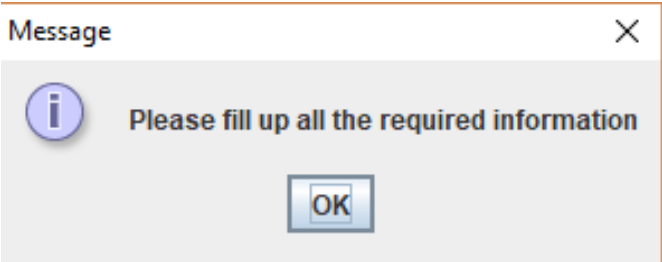

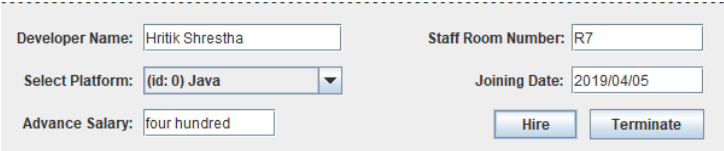

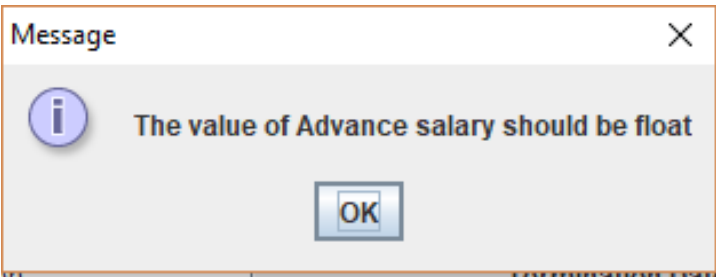

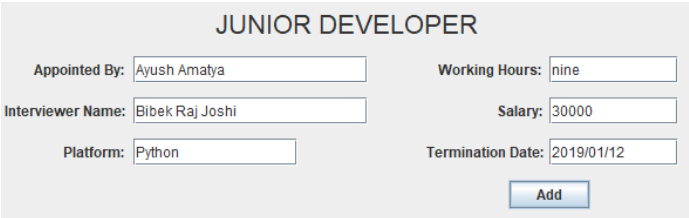

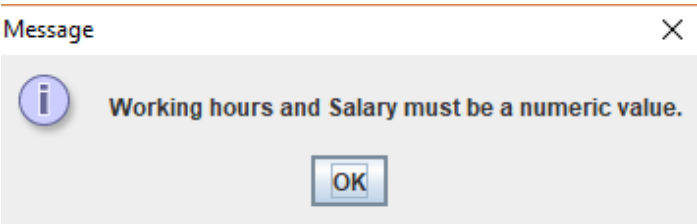

Test case number:	Test 3: Evidence should be shown of adding platform for junior developer
Objective/Steps:	<p>1. add platform for junior developer</p>  <p>2. click displayAll button and check output</p> 
Expected result:	<p>Success message should appear.</p> <p>Information about platform should be displayed when display all button is clicked</p>
Actual result:	<p>Success message was appeared.</p> <p>Information about platform was displayed when display all button is clicked</p>
Conclusion:	The program passed Test 3.

Test case number:	Test 4: Evidence should be shown of appointing senior developer
Objective/Steps:	<p>1. hire developer for senior developer</p>   <p>2. click displayAll button and check output</p> 
Expected result:	<p>Success message should appear.</p> <p>Information about platform with developer details should be displayed when display all button is clicked</p>
Actual result:	<p>Success message was appeared.</p> <p>Information about platform with developer details was displayed when display all button is clicked</p>
Conclusion:	The program passed Test 4.

Test case number:	Test 5: Evidence should be shown of appointing junior Developer
Objective/Steps:	<p>1. appoint developer for junior developer</p>  <p>2. click displayAll button and check output</p> 
Expected result:	<p>Success message should appear.</p> <p>Information about platform with developer details should be displayed when display all button is clicked</p>
Actual result:	<p>Success message was appeared.</p> <p>Information about platform with developer details was displayed when display all button is clicked</p>
Conclusion:	The program passed Test 5.

Test case number:	Test 6: Evidence should be shown of terminating developer contract of senior developer
Objective/Steps:	<p>1. terminate developer for junior developer</p>  <p>2. click displayAll button and check output</p> 
Expected result:	<p>Success message should appear.</p> <p>Information about platform without any developer details should be displayed when display all button is clicked</p>
Actual result:	<p>Success message was appeared.</p> <p>Information about platform without any developer details was displayed when display all button is clicked</p>
Conclusion:	The program passed Test 6.

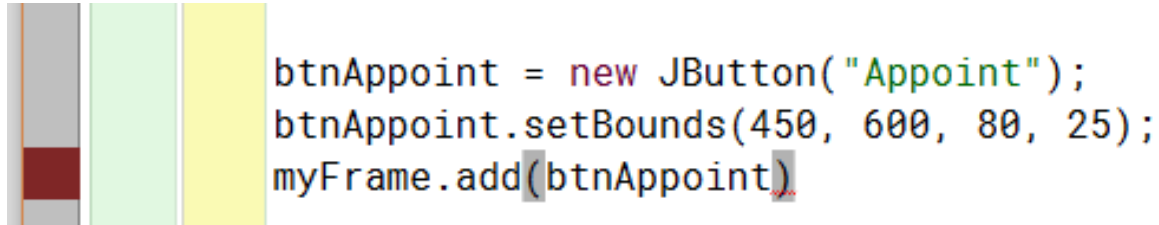

Test case number:	Test 7: Test that appropriate dialog boxes appear when unsuitable values are entered.
Objective/Steps:	<p>1. try to add platform with some empty fields.</p>   <p>2. try to hire developer with the value of advance salary as string</p>   <p>3. try to add platform with the value of working hour as string</p>  

Expected result:	Dialog box with suitable message should be displayed.
Actual result:	Suitable dialog box with suitable message was displayed.
Conclusion:	The program passed Test 7.

## Error Detection and Error Correction:

Some of the errors that occurred during writing my code are as follows:

Error 1:

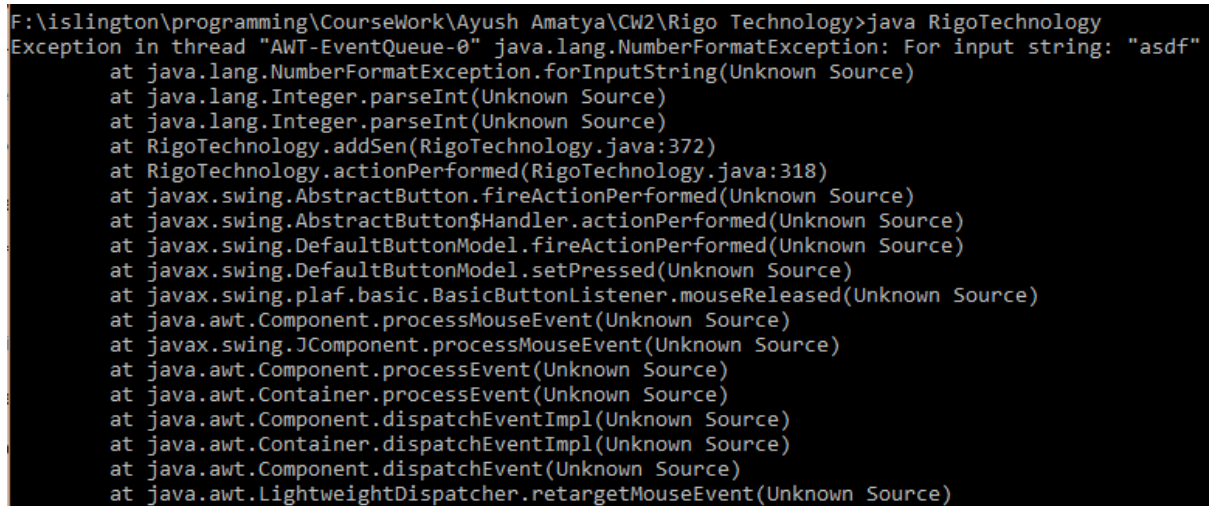

```
btnAppoint = new JButton('Appoint');
btnAppoint.setBounds(450, 600, 80, 25);
myFrame.add(btnAppoint);
```

This was a syntax error where I forgot to write “;” after returning the value.

It was easy to correct as the compiler detected the error and gave the solution. Hence, I corrected this error by adding “;” at the end of the syntax.

Error 2:

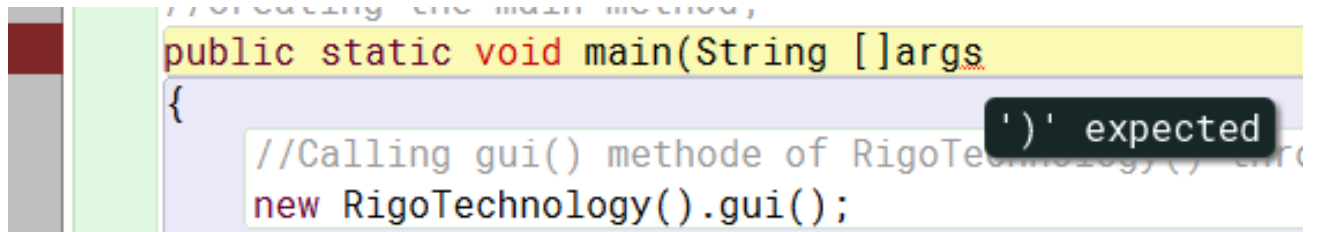

```
F:\islington\programming\CourseWork\Ayush Amatya\CW2\Rigo Technology>java RigoTechnology
Exception in thread "AWT-EventQueue-0" java.lang.NumberFormatException: For input string: "asdf"
    at java.lang.NumberFormatException.forInputString(Unknown Source)
    at java.lang.Integer.parseInt(Unknown Source)
    at java.lang.Integer.parseInt(Unknown Source)
    at RigoTechnology.addSen(RigoTechnology.java:372)
    at RigoTechnology.actionPerformed(RigoTechnology.java:318)
    at javax.swing.AbstractButton.fireActionPerformed(Unknown Source)
    at javax.swing.AbstractButton$Handler.actionPerformed(Unknown Source)
    at javax.swing.DefaultButtonModel.fireActionPerformed(Unknown Source)
    at javax.swing.DefaultButtonModel.setPressed(Unknown Source)
    at javax.swing.plaf.basic.BasicButtonListener.mouseReleased(Unknown Source)
    at java.awt.Component.processMouseEvent(Unknown Source)
    at javax.swing.JComponent.processMouseEvent(Unknown Source)
    at java.awt.Component.processEvent(Unknown Source)
    at java.awt.Container.processEvent(Unknown Source)
    at java.awt.Component.dispatchEventImpl(Unknown Source)
    at java.awt.Container.dispatchEventImpl(Unknown Source)
    at java.awt.Component.dispatchEvent(Unknown Source)
    at java.awt.LightweightDispatcher.retargetMouseEvent(Unknown Source)
```

This was a runtime error that occurred while I tried to enter string value where integer value was expected when hiring a developer for senior developer.

It was little difficult to solve this error. Since it was a run time error, the compiler was unable to detect the exact location of the error. After my hard effort, I found that I forgot to use try catch in hireSen() method. Hence, I corrected this error by using try catch in hireSen() method.

Error 3:

```
//Creating the main method,  
public static void main(String []args  
{  
    //Calling gui() methode of RigoTechnology() and  
    new RigoTechnology().gui();
```

This was a syntax error where I forgot to close small bracket.

It was easy to correct as the compiler detected the error and gave the solution. Hence, I corrected this error by closing the bracket.

## Conclusion:

All the tasks assigned in the coursework was finally completed through much trial and errors. Conclusion: Finally, after completion of this project I have learn many new things. The tasks assigned weren't that easy. Alot of reasearch and study was done about syntax, types of errors, frame, increase font size, use of JComboBox and many other topic related to java. After the completion of this project I learn many different things about java and its programming styles. I also learned about class diagram and pseudocode. Their was no bugs and errors in final check and the submission was done in time.

This coursework helps to improve ourself and get better in programming. It increase our skills and capacity of doing project in vast way. Learning this project in detial would be alot helpful in pursue of development of career as a good programmer. It provied us a detail idea about how we can interact with the user as a programmer. This coursework teaches us the combine use of all the different classes and method of different classes. It gave us detailed knowledge about how to use the methods of other classes in another class. It made our vision about objects more clear and vast. We are now able to interact with the user from different means like buttons, text box, combo box, etc.

It requires nights of hardwork and must be determinant for better improvement. Even it was tough it was fun doing it. This project was sucessfully completed, but their are more thing we must learn about programming in very vast ways. It feels great if our codes would be correct and program would run without bug and error. In process of completing this coursework I faced lots of problems while designing the frame and read the inputs of the user. I sloved this problem by the help of my friends, teacher and ofcourse internet. I googled lots of thing related to the functions of some inbuilt java class and method.

## Appendix:

The codes to complete this coursework was written in blueJ. The codes written in this project are as follows:

### Class: RigoTechnology

```
/**
 * Write a description of class RigoTechnology here.
 *
 * @author Ayush Amatya
 * @version 1.1
 */
import javax.swing.*;
import java.awt.*;
import java.awt.event.*;
import java.util.*;

//Creating a class RigoTechnology that implements an interface ActionListener;
